

Implement FPFH

Test with ModelNet40: chair/chair_0056.txt

Use ISS to find feature points and select three among them. Indices: 1119(point1), 8628(point2), 2696(point3)

Point 1 and 2 are both around the end-point of each leg. Point3 is on the chair seat.

It can be seen that point1 and 2 are similar almost everywhere on the histograms while point3 would diverge from them.
